

XM radio is a big benefit for my husband and I - we are over the road truck drivers and we depend on XM radio to keep us informed of traffic and weather throughout the US as well as allowing us to listen to the same channel from one coast to the next without losing the signal. This is a definite safety issue as well as we are not distracted trying to find a clear channel to listen to while we are driving. Please reject to NAB's petition 04-160 as it will be a big disservice to the many drivers throughout the country. Thank you
